You won't need to remember numerical IP addresses or configure your router – just install the software, follow this guide and you'll be done in no time! Let's get started! Head over to the [TeamViewer download page for Mac](#) (like will open in a new window/tab) and download Version 11 (eleven) or higher.. Click the Next button to continue Click Finish when prompted At this point the TeamViewer screen will appear.. Click the Continue Create a very strong password and enter it in both of the supplied fields.

Don't be surprised that your Windows “desktop wallpaper” isn't displaying – by default, it won't.. Then enter a password in the required fields Make sure this password is different from all of the other passwords you've created in this process (and contains both upper and lower case letters, numbers and symbols).

On the Mac, selecting 'Mouse', ticking/checking 'Secondary click' and selecting 'Click on right side' did the try for me.. In the My computers list, there should be one entry – probably numerical Click that entry to select it, then click it again to rename it.. The one thing that you'll have to 'tolerate' is when you close the TeamViewer app, you'll get a little reminder that it's only free if you're using it for personal (non-commercial) reasons.

With the setup you now have, you can also connect to your Mac from your Windows 10 device.. Close that browser tab (or exit your browser entirely) Back in the TeamViewer App, enter the email address and password of your newly created and confirmed account, and then click the Assign button.. This software that this tutorial is based around is called “TeamViewer” It's free to use for non-commercial purposes.

Then click the Assign device to account 'link' Below the email/password sections, locate the link titled Create account and click it.. Since this is the name that will be “assigned” to this Mac, give it a more descriptive title.. Sign in to your TeamViewer account here as well In that same window, locate the My computers section and then click the “side arrow” (as seen in the screenshot below) to expand it into a menu.. Click Next to continue That's it – you're done! Click the Finish button When TeamViewer launches, locate the Computers & Contacts section.. Utilizing nothing but free software, this guide will take you every single step of the way through setting up your Mac and Windows computers so that you can access and use Windows via your Mac (and vice-versa!) just as if you were sitting in front of it.. This makes working on your Windows 10 device via your Mac seem 'smoother' and faster.. Check the email for the account you used when signing up and there should be a confirmation email from TeamViewer. e10c415e6f
